UNITED STATES PATENT GRANTS BY STATE, COUNTY, AND METROPOLITAN AREA

(UTILITY PATENTS, 1990 - 1999)

April 2000 OFFICE FOR PATENT AND TRADEMARK INFORMATION U.S. PATENT AND TRADEMARK OFFICE WASHINGTON, DC 20231

A TECHNOLOGY ASSESSMENT AND FORECAST REPORT

UNITED STATES PATENT GRANTS, BY STATE, COUNTY, AND METROPOLITAN AREA

(Utility Patents, 1990 - 1999)

This report, prepared by the Office for Patent and Trademark Information of the United States Patent and Trademark Office (USPTO), presents the numbers of patents granted to residents of each state, county (or county equivalent), and metropolitan area of the United States. Federal Information Processing Standards (FIPS) codes for each geographic area are also provided.

The geographic distribution of patents is based on the residence of the inventor whose name appears first on the printed patent. Only utility patents granted from 1990 - 1999 with a first-named inventor who resided in the United States are included in this report.¹

The patent data used to prepare this report were derived from the USPTO's Technology Assessment and Forecast database. Records in this relational database contain patent status and bibliographic information that is used by the Office for Patent and Trademark Information to develop statistical summaries of patent activity. A general description of the methodology used to generate the geographic distributions of patent activity is contained in the sections that follow.

For additional information about this report, or other patent data that are available from the USPTO, please contact the Office for Patent and Trademark Information by telephone at (703) 306-2600, or by facsimile at (703) 306-2737. Written correspondence should be addressed to:

USPTO Office for Patent and Trademark Information PK3--Suite 441 Washington, DC 20231

DATA SOURCES AND METHODOLOGY

The distributions of patents by state and by metropolitan area are derived from a distribution of patents at the county level. Unfortunately, the inventor county of residence seldom appears on patent records. Most patent records show only the inventor city and state of residence. Full address information, including zip code, is present only when an individual (as opposed to an organization) owns the patent. Less than one quarter of the patents awarded to U.S. resident inventors are individually owned. Therefore, a distribution of patents by county is, to a large extent, based on inventor city and state data.

The methodology used to determine inventor county of residence involves matching the inventor city, state, and zip code (if present) with corresponding data from a geographic reference file that also contains the county location of each combination of city, state, and zip code in the United States.

The geographic reference file used by USPTO to determine inventor county of residence contains 185,000 records that identify the city, state, zip code, and county location of populated places in the United States. This file was developed from three data sources:

• Federal Information Processing Standards Publication 55: Guideline: Codes for Named Populated Places, Primary County Divisions, and Other Locational Entities of the United States and Outlying Areas (Department of Commerce, National Institute of Standards and Technology);

¹ The majority of patents issued by the USPTO are utility (i.e. invention) patents. Other types of patents and patent documents issued by USPTO, but not included in this report, are plant patents, design patents, statutory invention registration documents, and defensive publications.

- the Geographic Names Information System (U.S. Department of the Interior, U.S. Geological Survey);
 and
- a data file based on the 1990 City-State file developed by the United States Postal Service.

Additional records are continuously added to the geographic reference file to reflect naming conventions that frequently appear on patent records, such as abbreviations (e.g., "hgts.", "heights" or "hts."). New records for frequently misspelled city names (e.g., "Tucson" or "Tuscon"), and for new zip codes are also added to the reference file.

About 88% of utility patents can be associated with one specific county by matching inventor address information with records in the geographic reference file. The remaining 12% of utility patents contain inventor addresses that correspond to two or more counties. Usually, this situation occurs when the inventor address corresponds to a single, populated place that spans multiple counties. Occasionally, this situation can occur when the inventor address corresponds to two or more places within a state that share the same name. In some states, for example, the same township name can appear in ten or more counties. A relatively small number of utility patents (.02% of total patents issued) can not be associated with any county due to insufficient or incorrect inventor address information. These patents are identified as county UNKNOWN in Table 3.

The program that matches inventor address data to geographic reference data also assigns a weight to each patent to indicate the number of counties associated with that patent. When a patent is associated with a single county, the county weight equals "1." When a patent is associated with multiple counties within a state, a fractional weight is assigned (e.g., .5 = two counties; .33 = three counties, etc.). Patent counts for each county are calculated from the sum of these weights. State and metropolitan area counts are calculated from the appropriate county totals.

METROPOLITAN AREAS

The numbers of patents awarded to inventors within a county do not necessarily reflect the level of inventive activity that is occurring within that county. County totals are based on inventor county of *residence*, which is not necessarily the same as the inventor county of employment. A distribution of patent activity by metropolitan area is, by definition, more likely to encompass residential and employment areas.

A metropolitan area is a geographic area that contains a large population nucleus, plus surrounding communities with a high degree of social and economic integration with that population nucleus. At a minimum, the population nucleus consists of a city or urbanized area with a population of at least 50,000 inhabitants.

The Office of Management and Budget established criteria to define several categories of metropolitan areas. These criteria consider factors such as percent urban, population density, and patterns of commuting to work to establish the limits of the metropolitan area. With the exception of the New England region, the geographic limits of a metropolitan area are defined by county boundaries. This facilitates the comparison

_

² Although relatively few patents contain place names that correspond to multiple places within a single state, this can be a potentially serious source of error in the number of patents associated with some counties. This is particularly true if a larger city with a high volume of patent activity (e.g., Mountain View, CA) shares the same name as a small town with little or no patent activity. The procedure for identifying these situations was to first identify any incorporated place, census designated place or minor civil division with a 1990 population of 2,500 or more inhabitants. These place names were then compared to place names on the geographic reference file to identify multiple places with the same name within each state. The resulting place names were queried on USPTO's Automated Patent System to determine if patents were issued to inventors in one or more of the places with the same name. The residence of other inventors and assignees was used to determine the probable geographic location of each patent. If research indicated high patent activity was concentrated in some, but not all of the locations, duplicate place names without patent activity were deleted from the geographic reference file.

of various socio-economic data that are compiled at the county level. In the New England region, cities and towns have a high degree of administrative importance and these are typically used to define the boundaries of a metropolitan area. One exception is the New England County Metropolitan Area (NECMA). The limits of a NECMA are defined by county boundaries, instead of cities and towns, in order to facilitate analysis of socio-economic data that can not be compiled at the sub-county level.

Other categories of metropolitan area include the Metropolitan Statistical Area (MSA), formerly known as a Standard Metropolitan Statistical Area, the Consolidated Metropolitan Statistical Area (CMSA), and the Primary Metropolitan Statistical Area (PMSA). Generally, an MSA includes a city or urban area with at least 50,000 inhabitants, plus surrounding counties (or subcounties in New England) with metropolitan characteristics. The CMSA is a much larger metropolitan area with at least one million inhabitants and which meets certain other definitional criteria. CMSAs are composed of PMSAs and PMSAs are composed of counties (or subcounties in New England).

New metropolitan areas can be established or the geographic composition of current metropolitan areas can occur each year. The metropolitan areas identified in this report were announced by the Office of Management and Budget and were effective July 1, 1999. Some metropolitan areas in this report were not established for the entire period 1990-1999, although patent data are presented for the entire period. Thus, the total number of patents awarded to inventors who resided in metropolitan areas can change for earlier years if new or modified metropolitan areas are announced in the current year. In addition, changes to previously published data can result from corrections to the patent file. The Office for Patent and Trademark Information continuously monitors the content of the patent file to ensure the accuracy of the data. The number of patents associated with a particular geographic area may change slightly as state/country code errors in the patent file are identified and corrected.

DATA TABLES

Table 1. U.S. Utility Patent Grants by Metropolitan Area, 50 States, 1990-1999, Rank Ordered List, Based on 1999 Grants.

This table provides the number of utility patents awarded to inventors in each MSA, NECMA, and PMSA in the 50 states. Metropolitan areas are rank-ordered, by patent count, from highest to lowest. For metropolitan areas in the New England region, only NECMAs are included in Table 1, since patent counts are not available for the subcounty areas that comprise other categories of New England metropolitan areas.

Table 2. U.S. Utility Patent Grants by Metropolitan Area and Geographic Components, 1990-1999.

This table provides the total number of utility patents awarded to inventors in each CMSA, MSA, NECMA, and PMSA in the 50 states. Patent counts are also provided for the geographic components of each metropolitan area. Metropolitan areas are listed in the sequence of their FIPS metropolitan code, which is generally alphabetic order.

Table 3. U.S. Utility Patent Grants by State, County, and County Equivalents, United States and U.S. Possessions, 1990-1999.

This table provides the number of utility patents awarded to inventors in each U.S. state, county, or county equivalent, the District of Columbia, U.S. Pacific Islands, Guam, Puerto Rico, and the U.S. Virgin Islands. County equivalents include parishes in Louisiana, and borough/census areas in Alaska. Separate counts are provided for independent cities in Maryland, Missouri, Nevada, and Virginia. Fractional patent counts may occur for some counties when a patent is associated with multiple counties within a state; all fractional patent counts are rounded to the nearest whole number. County codes correspond to FIPS identifying codes, except code '999', which is used when a patent can not be associated with any county within a state (UNKNOWN). State totals represent the sum of county totals and state totals that contain fractional counts

are rounded to the nearest whole number. Alphabetic codes for each state correspond to U.S. Post Office abbreviations and numeric codes correspond to FIPS identifying codes.

TABLE 1. U.S. Utility Patent Grants by Metropolitan Area, 50 States, 1990-1999 Rank Ordered List, Based on 1999 Grants

Metropolitan areas are based on definitions effective July 1, 1999. MSA = metropolitan statistical area; NECMA = New England county metropolitan area; PMSA = primary metropolitan statistical area. The geographic distribution of patents is based on the residence of the first-named inventor.

⁽¹⁾ Includes metropolitan areas within the 50 states and District of Columbia; does not include metropolitan areas in Puerto Rico.

⁽²⁾ Includes metropolitan areas in Puerto Rico.

⁽³⁾ Totals may differ slightly from other published data due to cumulative rounding error (approximately two-tenths of one percent). In addition to the 50 States, District of Columbia, and Puerto Rico, Total patent count (U.S. origin) includes Guam, U.S. Pacific Islands, U.S. Virgin Islands, and patents for which a specific inventor state of residence could not be determined.

TABLE 2. U.S. Utility Patent Grants By Metropolitan Area And Geographic Components, 1990 - 1999

Metropolitan areas and geographic components are based on definitions effective July 1, 1999. CMSA = consolidated metropolitan statistical area; MSA = metropolitan statistical area; NECMA = New England county metropolitan area; PMSA = primary metropolitan statistical area. Geographic codes are Federal Information Processing Standards codes. The geographic distribution of patents is based on the residence of the first-named inventor. Patent counts for parts of New England counties are not available "(n.a.)"; see not ate the end of the New York-Northern New Jersey-Long Island, NY-NJ-CT-PA CMSA listing.

TABLE 3. Utility Patent Grants By State, County, And County Equivalents, United States And U.S. Possessions, 1990 - 1999

Alphabetic and numeric state codes and numeric county codes correspond to Federal Information Processing Standards (FIPS) codes. Numeric county code 999 is used to represent patents that could not be associated with any particular county (or county equivalent) within the state.
